So are we!! Come be a part of discovering a stop-smoking method in our research study!

The Oral Health Research Institute (OHRI) of the IU School of Dentistry is looking for healthy cigarette smokers who:

- Want to quit
- Have smoked at least 10 cigarettes daily for the past year
- Are between 18 and 65 years old.
- Have not used any over the counter or prescription stop smoking therapies (for example, Zyban®, Wellbutrin®, Chantix®) in the last month

We are conducting a year-long research study testing the effectiveness and safety of a new experimental vaccine vs. a placebo. Participants will be required to visit our Institute a total of 20 times during the year. The screening visit will include a urinalysis, physical exam and blood tests (all at no expense to the participants). All of the study procedures and the risks of the study will be discussed with you prior to your participation. Participants will be compensated for their visits.

If you are interested in participating in this research study or have any questions, please call us at (317) 274-8822 and ask for the stop smoking study. The OHRI is located on the IUPUI campus at 415 Lansing Street, Indianapolis, IN 46202.
